SUBJECT Flood Control Program	UNC	
This is UNEVALUATED Information		DATE DISTRIB. 7 July 1967 NO. OF PAGES 2 SUPPLEMENT TO REF. 25X1

25X1

1. From 1975 to October 1976 I was in charge of a motor pool in Budapest and occasionally drove Hungarian officials to Puch, Bodorvar, Gyulap, Vadas Kert and other small towns. The towns were located in the northwestern section of Hungary.
2. As of 1975 the two villages of Acsany and Acs which were located east of Bodorvar merged and became known as Acsanyvase. Prior to 1975 both were separated by approximately one kilometer.
3. Almost every March the Danube River (Duna) in the vicinity of Puch, Lipets, Acsanyvase and Gyulap overflows and covers the areas southward as far as the small Danube (Kis Duna). The overflow was caused by the melting of the snow and rains in Germany and Switzerland.
4. It would take months before the water receded. During the overflow all the roads were under water and traffic was at a standstill unless one had a boat. Usually the farmers were prepared and did have a boat.
